

A safe and easy way to lose unwanted centimeters!

Information Brochure

## How does the TC CRYO XL work?

The TC Cryo XL changes extremely fast (within 6 seconds!) between temperatures of 6 to 41 degrees Celsius, and can continue to alternate with different preset programs. These programs are fully automatic and also fully secure. The warm and cold temperatures are pumped through the soft wraps via liquid, thus quickly and intensively transferring them to the body. The first time the customer experiences the 6 degrees Celsius, it is definitely quite cold, but this sensation wears off within a few minutes, after which the customer can relax or even enjoy a quick nap!

## Localized slimming with the TC Cryo XL

The thickness of the subcutaneous fat layer can be reduced by a healthy diet and exercise by burning brown fat. However, the body also stores excess energy in the form of white fat, which can only be used when it has been converted to brown fat. The TC Cryo XL offers the solution with 3 key focal points:

- 1** With the TC cryo XL, we cool the entire zone including the underlying fat and muscle tissue to 6 ° C. The muscles want to keep the body at temperature (37 ° C) and therefore produce heat. This warmth is generated because these muscles produce a natural hormone (Irisin), which stimulates brown fat to burn. This way, the volume of the brown fat present already decreases.
- 2** The same hormone Irisin also inhibits the production of new white fat cells. As a result, the treatment has a much longer lasting effect, and it is also much easier to maintain the result achieved.
- 3** A very important effect of supplying cold is that your liver also produces a natural hormone, called FGF-21. This hormone helps to convert the stubborn white fat into brown fat, which can be burned again. This way, we can tackle the problematic white fat layer during a course of treatment and reduce the body size of the treated problem area!

## Why do we supply heat in between?

After more than fifteen minutes of cold, the body goes into "isolation mode" because the blood vessels narrow to block the cold. This way, the effect of that cold also decreases drastically because it no longer reaches the deeper tissue via the blood circulation. That is why we supply heat very quickly in between (41 ° C), so that the blood vessels widen again and this isolation mode is lifted. This way, every subsequent cold cycle has optimal results again!

## What makes the TC CRYO XL unique?

**Surface:** The TC Cryo XL can treat more than half a square meter at the same time! Not only is it the largest surface area on the market, but because it consists of 4 separate, flexible wraps, it is also the most flexible solution ever. This allows you to simultaneously treat, for example, the entire abdominal area including love handles, as well as both thighs all around!

**Double treatments:** Because the TC cryo XL can fully utilise 4 big wraps, this powerhouse is also extremely suitable for treating 2 persons at the same time. Simply place the device between 2 treatment chairs and let friends, family or partners undergo the treatment together!

**Safer and more effective:** Because the TC cryo XL never freezes, it's not only the safest version of cryolipolysis, but also does not require a recovery period. In addition, by warming up quickly in between the cold cycles, we are up to 75% more effective than traditional freezing methods!

**User-friendly:** Once you have connected the customer, you can do something else without any worries because the TC cryo XL does everything automatically! You do not have to perform tiring manual operations and because the machine is safe, you also do not have to monitor it continuously. In addition, we have invested a lot of time in the user interface, so that you do not have to. Operation has never been easier!

**Dutch manufacture and service:** The TC Cryo XL has been developed and built entirely in the Netherlands, which is why knowledge and service are also close by. So if a technical defect ever arises, you are usually back to work with the TC cryo XL within two working days!

## What results can you achieve?

For a good result we always recommend multiple treatments (on average 4 to 5). With just the treatment alone you can already achieve a loss of several centimeters, but if you also opt for a healthy lifestyle during the treatment period, even results above 10 cm are no longer an exception! Below you will find a small selection of the results we have received from our customers. Click [HERE](#) if you would like to see more results!

# OUR SUCCESSES SO FAR!

## IN THE NETHERLANDS

- Over 50,000 people treated
- More than 60 TC Cryo locations
- 40 TC Clinics salons

## ACTIVE IN

- The Netherlands
- Belgium
- Germany
- Poland
- Lithuania

## IN EUROPE

- Over a 100 locations
- Over 200 Cryo devices placed

ARE YOU GOING TO BE OUR NEXT LOCATION?

## Area Protection

TCS International also gives all its customers with a maintenance contract automatically area protection. Our criterion is a minimum of 40,000 inhabitants per machine, so that there is enough space for your current as well as future customer base. We would like to mention here that we have no influence on purchased machines that may move in the future. However, if this relocation conflicts with an existing customer with protection, then the protection for the moving party will of course lapse!
